Configuration File Overview

Setting	Default Value	Description
AD_Max_Age	45 (days)	For Active Directory discovery, only include devices that have logged in within the last N number of days.
Max_Threads	15 (threads)	The maximum number of computers that AIT will inventory concurrently.
Scan_Frequency	10080 (minutes)	How long (in minutes) before AIT will re-scan a device that has already been scanned. The default is 7 days.
Export_Last_Seen_Days	90 (days)	Devices that have not been sucessfully scanned within the last seen days are excluded from the exports.
LogToScreenLevel	3	The logging level that is output to the screen. 1. Critical 2. Warning 3. Information 4. Verbose
Scan_Timeout	600 (seconds)	How long to wait (in seconds) for a device to be scanned before timing out and aborting the scan. The default is 10 minutes.
DataStorePath	Default	The path to the data store. **Default** signifies the default location, which is either: • **C:\ProgramData\Autodesk\AIT** if in Program Files • Same folder as **AIT.exe** if not in Program Files Alternatively, a UNC path can be specified. Only used for logon/startup script or 3rd party tool deployment, for example: \\SERVER01\AIT\Data\

Setting	Default Value	Description
PerComputerDataStore	False	If **True**, each inventoried computer running AIT will output a separate data store with the name of the computer. Only used for logon/startup script or 3rd party tool deployment. If **False**, results are output to the default DataStore.xml.
Force_WMI_Instrumentation	True	Force the use of Windows Management Instrumentation rather than auto-detecting if Windows Management Infrastructure is available.
